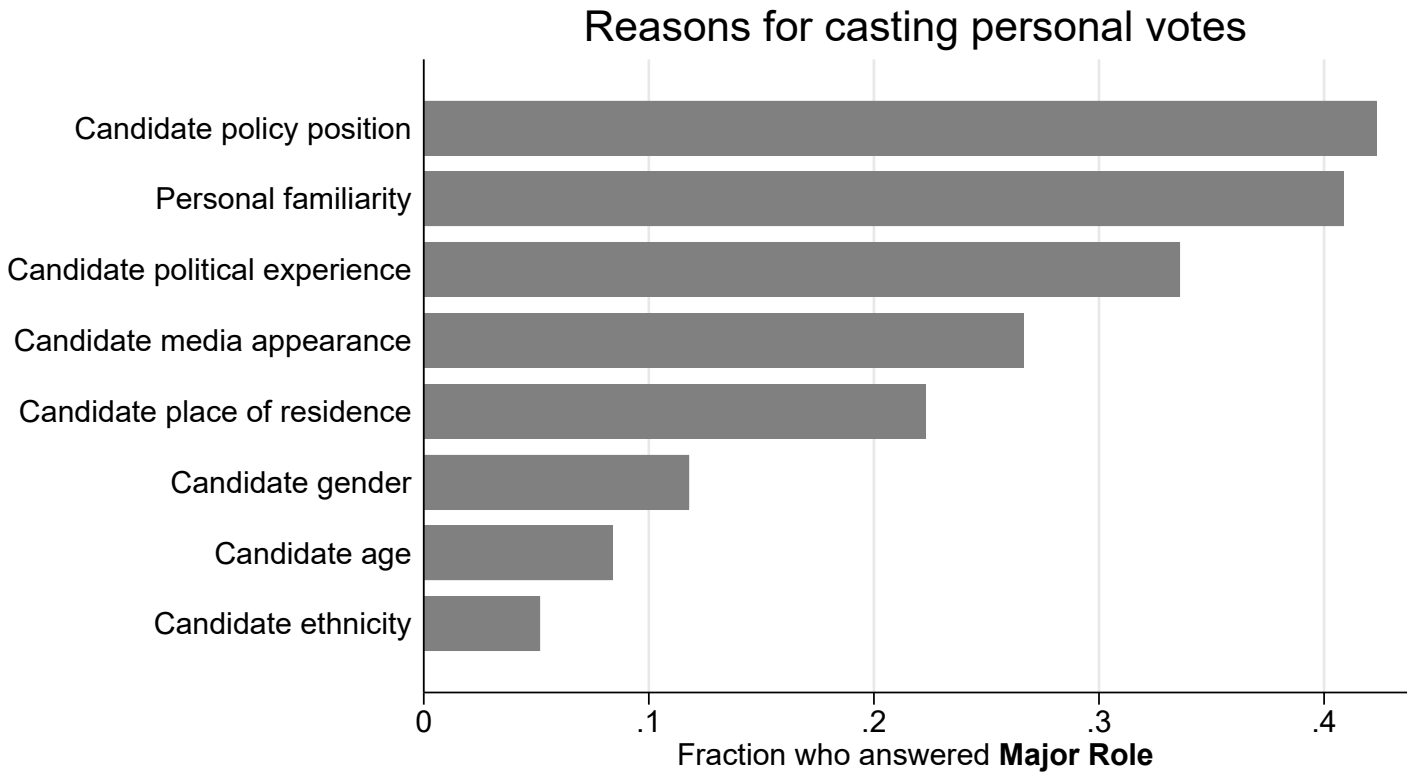
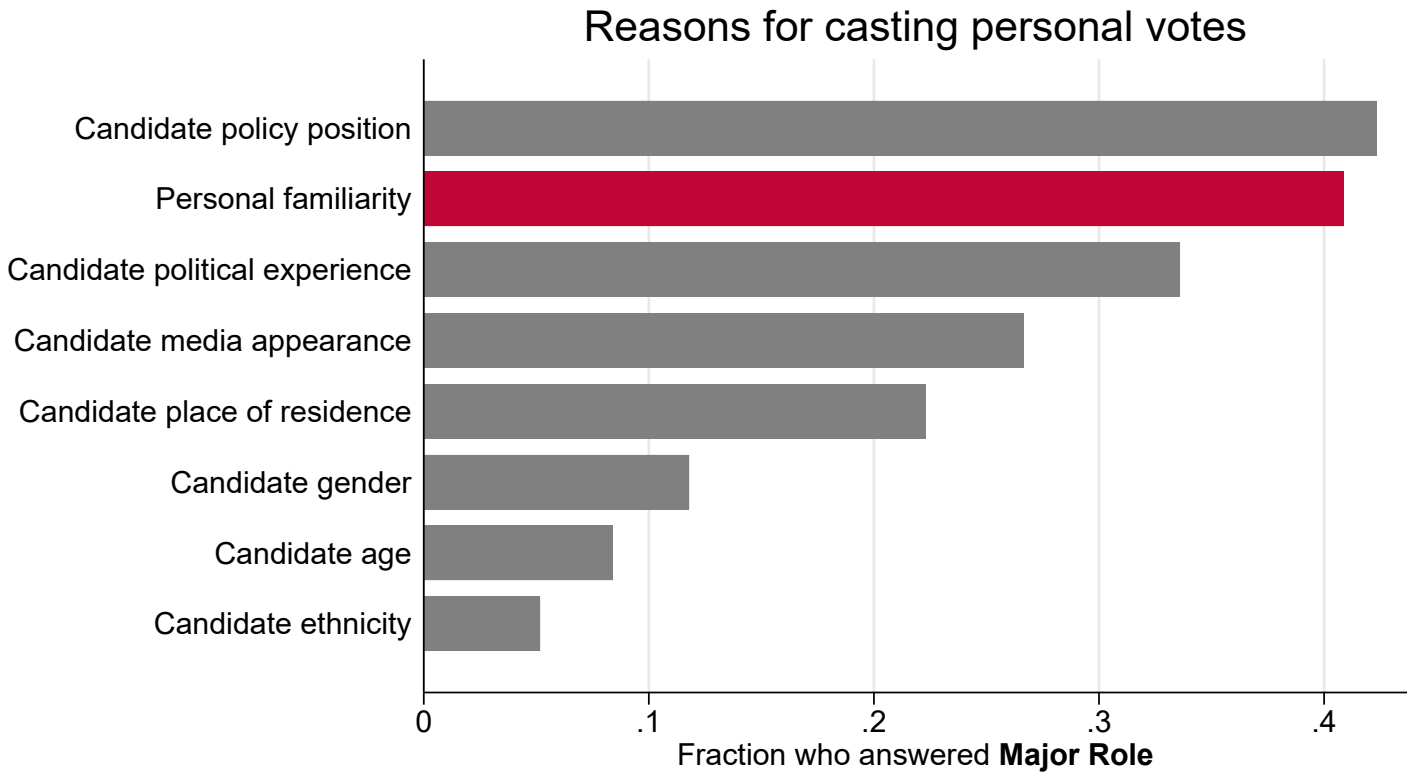
'Personal familiarity' plays a major role in local elections



Note: Data from the Norwegian 2015 Local Election Survey (n= 619).

'Personal familiarity' plays a major role in local elections



Note: Data from the Norwegian 2015 Local Election Survey (n= 619).

Introduction

Much of the literature assumes that activating social and economic networks is a central strategy for political mobilization (see, e.g., Cox and Munger, 1989; Uhlaner, 1989).

Introduction

Much of the literature assumes that activating social and economic networks is a central strategy for political mobilization (see, e.g., Cox and Munger, 1989; Uhlaner, 1989). Networks can be leveraged to:

- Reduce the cost of voting
- Increase the cost of *not* voting
- Signal relevant information

Introduction

Much of the literature assumes that activating social and economic networks is a central strategy for political mobilization (see, e.g., Cox and Munger, 1989; Uhlaner, 1989). Networks can be leveraged to:

- Reduce the cost of voting
- Increase the cost of *not* voting
- Signal relevant information

Existing evidence on network mobilization is (a) recent, sparse (e.g., Bond et al. 2012; Nickerson, 2008; Eubank et al., 2021),

- Reduce the cost of voting
- Increase the cost of *not* voting
- Signal relevant information

Existing evidence on network mobilization is (a) recent, sparse (e.g., Bond et al. 2012; Nickerson, 2008; Eubank et al., 2021), and (b) restricted to small networks embedded in single electoral districts

Introduction

Much of the literature assumes that activating social and economic networks is a central strategy for political mobilization (see, e.g., Cox and Munger, 1989; Uhlaner, 1989). Networks can be leveraged to:

- Reduce the cost of voting
- Increase the cost of *not* voting
- Signal relevant information

Existing evidence on network mobilization is (a) recent, sparse (e.g., Bond et al. 2012; Nickerson, 2008; Eubank et al., 2021), and (b) restricted to small networks embedded in single electoral districts

We study **larger** networks that reach **across district boundaries** using rich administrative data from Norway

This paper I

We study mobilization of voters through social networks using:

This paper I

We study mobilization of voters through social networks using:

1. A large sample of Norwegian urban voters in 2015 and 2019

This paper I

We study mobilization of voters through social networks using:

1. A large sample of Norwegian urban voters in 2015 and 2019
2. The universe of local politicians

This paper I

We study mobilization of voters through social networks using:

1. A large sample of Norwegian urban voters in 2015 and 2019
2. The universe of local politicians

Administrative data allow us to observe:

RQ: *How does the candidacy of a network member affect turnout?*

This paper II

RQ: *How does the candidacy of a network member affect turnout?*

This paper II

RQ: *How does the candidacy of a network member affect turnout?*

- Identification
  - Temporal variation in mobilization exposure
  - Cross-district geographic spread of networks (à la Black, 1999)

This paper II

RQ: *How does the candidacy of a network member affect turnout?*

- Identification
  - Temporal variation in mobilization exposure
  - Cross-district geographic spread of networks (à la Black, 1999)
- Networks: Families, co-workers, immigrants

This paper II

RQ: *How does the candidacy of a network member affect turnout?*

- Identification
  - Temporal variation in mobilization exposure
  - Cross-district geographic spread of networks (à la Black, 1999)
- Networks: Families, co-workers, immigrants
- Preview of results

This paper II

RQ: *How does the candidacy of a network member affect turnout?*

- Identification
  - Temporal variation in mobilization exposure
  - Cross-district geographic spread of networks (à la Black, 1999)
- Networks: Families, co-workers, immigrants
- Preview of results
  - Candicacy of a network member $\rightarrow$ 2-4 p.p. increase in turnout

This paper II

RQ: *How does the candidacy of a network member affect turnout?*

- Identification
  - Temporal variation in mobilization exposure
  - Cross-district geographic spread of networks (à la Black, 1999)
- Networks: Families, co-workers, immigrants
- Preview of results
  - Candicacy of a network member $\rightarrow$ 2-4 p.p. increase in turnout
  - Effects $\nearrow$ when: network size $\searrow$, distance $\searrow$, viability $\nearrow$

This paper II

RQ: *How does the candidacy of a network member affect turnout?*

- Identification
  - Temporal variation in mobilization exposure
  - Cross-district geographic spread of networks (à la Black, 1999)
- Networks: Families, co-workers, immigrants
- Preview of results
  - Candicacy of a network member $\rightarrow$ 2-4 p.p. increase in turnout
  - Effects $\nearrow$ when: network size $\searrow$, distance $\searrow$, viability $\nearrow$
  - Sharp drop-off in mobilization impulse as networks cross district borders

Contribution

The paradox of voting (Downs, 1956)

$$P \times B > C$$

Contribution

The paradox of voting (Downs, 1956)

$$P \times B > C$$

Two schools of thought on turnout:

1. Individual decisions, e.g., civic duty (Riker and Ordeshook, 1968), altruism (Fowler, 2006); resources (Brady et. al, 1995)

Contribution

The paradox of voting (Downs, 1956)

$$P \times B > C$$

Two schools of thought on turnout:

1. Individual decisions, e.g., civic duty (Riker and Ordeshook, 1968), altruism (Fowler, 2006); resources (Brady et. al, 1995)

2. Strategic mobilization (e.g., Arceneaux and Green, 2009; Cox and Munger, 1989; Shachar and Nalebuff, 1999)

Contribution

The paradox of voting (Downs, 1956)

$$P \times B > C$$

Two schools of thought on turnout:

1. Individual decisions, e.g., civic duty (Riker and Ordeshook, 1968), altruism (Fowler, 2006); resources (Brady et. al, 1995)

2. Strategic mobilization (e.g., Arceneaux and Green, 2009; Cox and Munger, 1989; Shachar and Nalebuff, 1999)

'The jury is still out on what the foundations of micro-level turnout are' (Smets and van Ham, 2013, p. 345)

Outline

- Intro
- Institutional setting
- Data & network classification
- Empirical specification
- Results: Baseline
- Results: Distance to border
- Results: Why do immigrants mobilize more?
- Conclusion

Institutional Setting: Norway

Three levels of government: local, regional, national

- Local level is responsible for key welfare services – employ 17 percent of the labor force

Institutional Setting: Norway

Three levels of government: local, regional, national

- Local level is responsible for key welfare services – employ 17 percent of the labor force

Elections every four years

- **Voters** choose which party to vote for, and can cast personal votes on *any* party list (*flexible-list* PR)

Institutional Setting: Norway

Three levels of government: local, regional, national

- Local level is responsible for key welfare services – employ 17 percent of the labor force

Elections every four years

- **Voters** choose which party to vote for, and can cast personal votes on *any* party list (*flexible-list* PR)
- **Parties** can give certain candidates a "head start"

Institutional Setting: Norway

Three levels of government: local, regional, national

- Local level is responsible for key welfare services – employ 17 percent of the labor force

Elections every four years

- **Voters** choose which party to vote for, and can cast personal votes on *any* party list (*flexible-list* PR)
- **Parties** can give certain candidates a "head start"
- Number of seats determined by party votes

Institutional Setting: Norway

Three levels of government: local, regional, national

- Local level is responsible for key welfare services – employ 17 percent of the labor force

Elections every four years

- **Voters** choose which party to vote for, and can cast personal votes on *any* party list (*flexible-list* PR)
- **Parties** can give certain candidates a "head start"
- Number of seats determined by party votes
- Candidates determined by ex-post rank on party lists

Example: Oslo Labor Party (2015)

Rank ex-ante	Candidate
1	**Raymond Johansen**
2	**Tone Tellevik Dahl**

- $SameDistrict = 1$ if a member of i's network ran for office at t in i's district

Expectation: $\beta \approx 0, \gamma > 0$

Inference is drawn from voters who have a network member entering or exiting politics. Voters that move do not contribute to identification (because of α_{ib}).

Mean turnout (%)	71.59	71.59	39.39	39.39

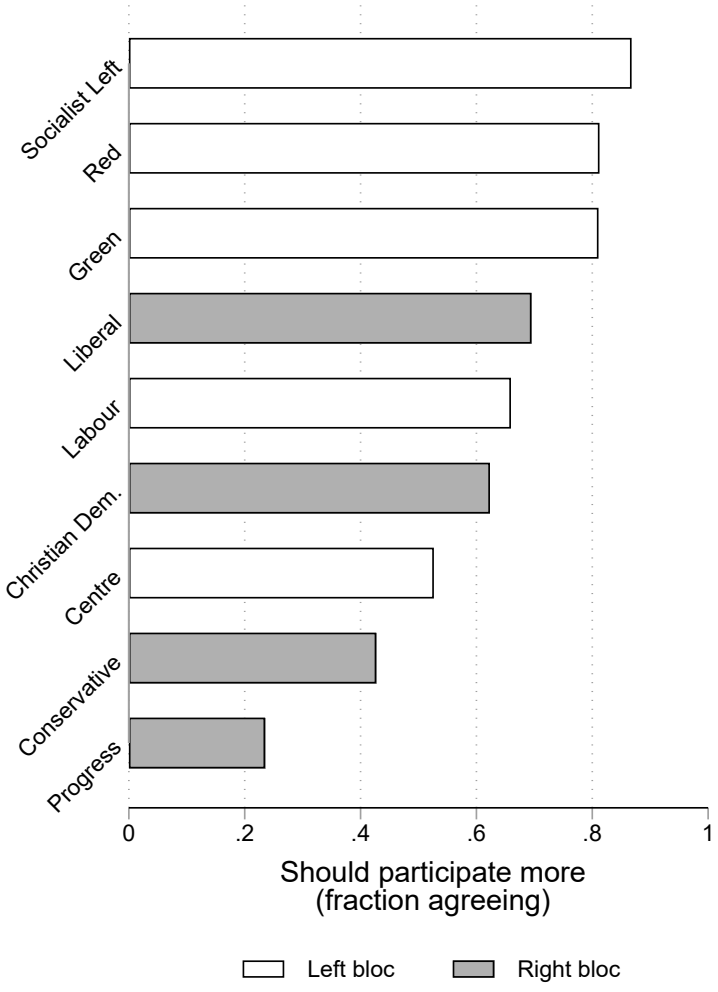
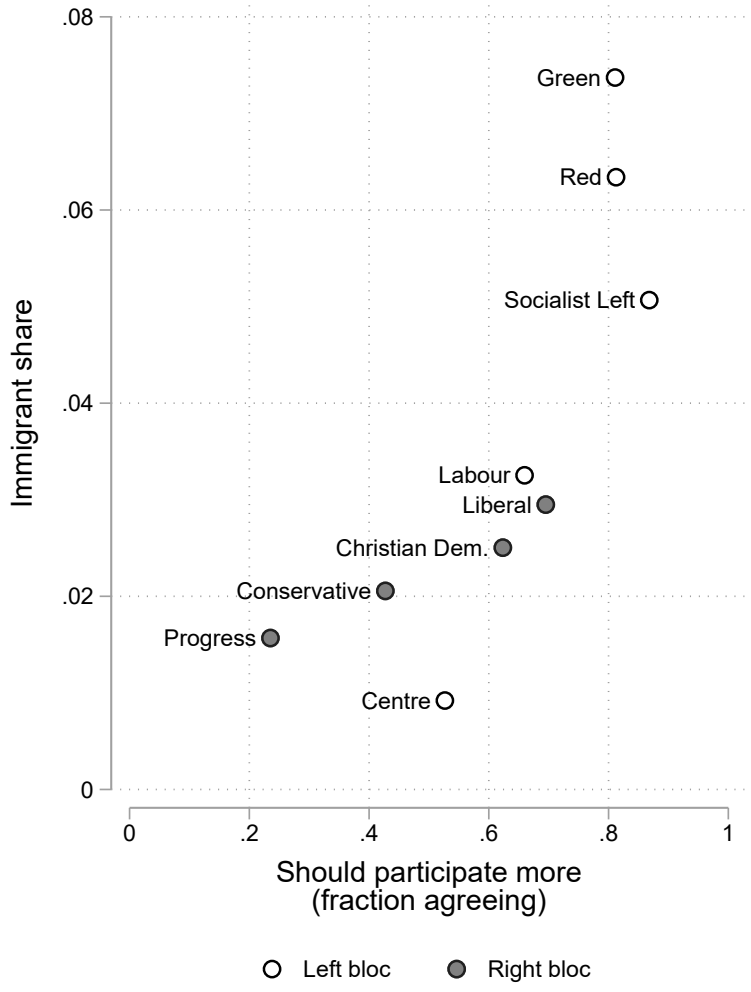
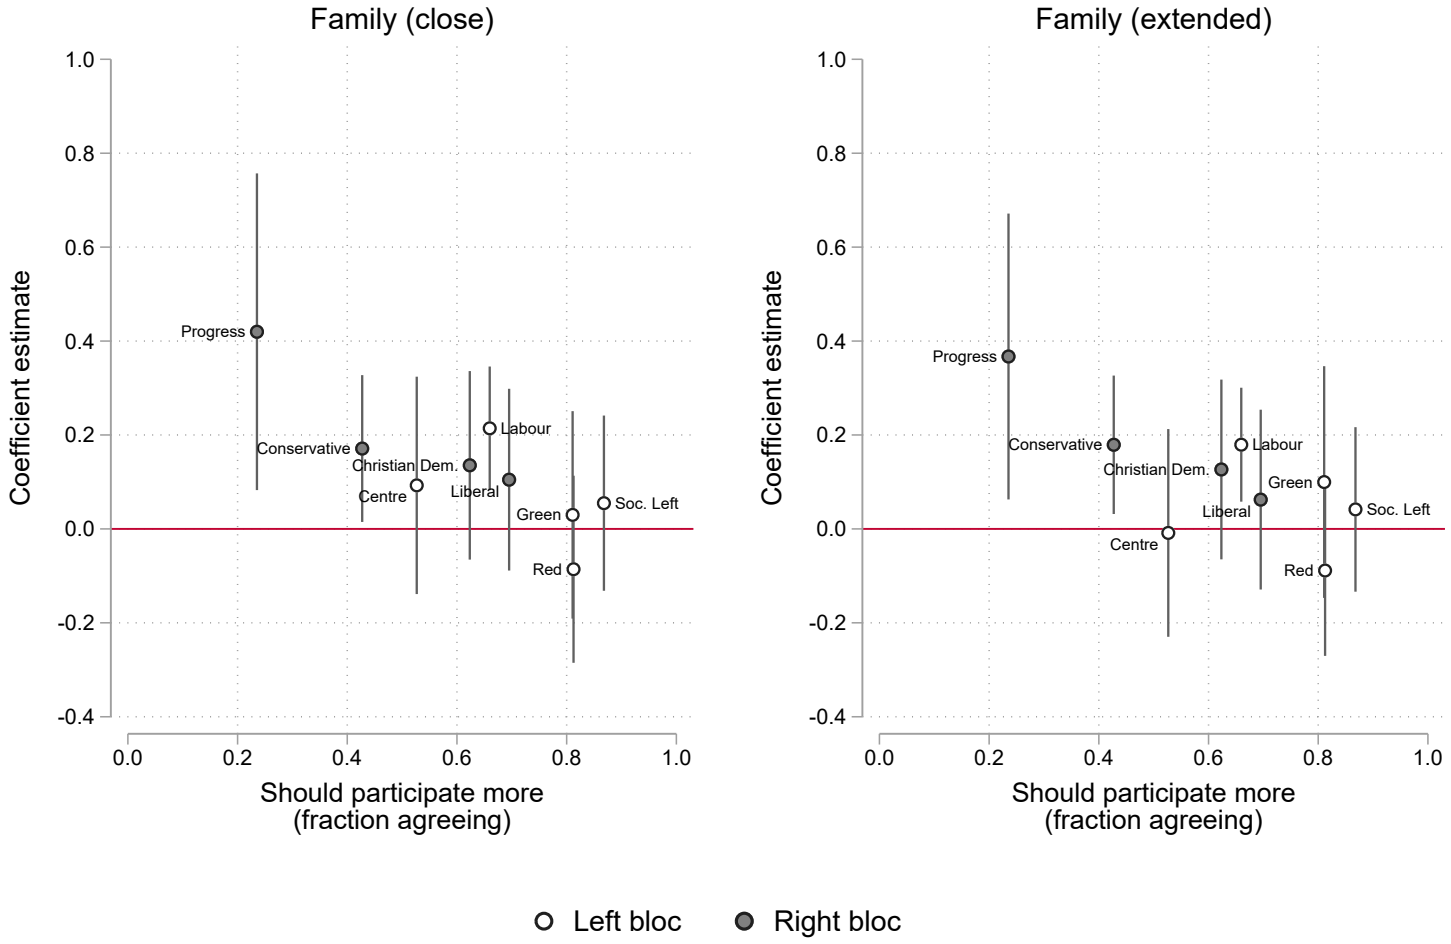
Family mobilization several times greater for immigrants. A 'Jackie and Jill' effect? (Anzia and Berry, 2011)

Survey evidence on attitudes toward immigrants, by party





Mobilization effects negatively correlated with attitudes toward immigrants



Conclusion

> *"The entire act of voting appears to be assisted by interactions with friends, neighbors and family members."* (Nickerson, 2008)

Conclusion

"The entire act of voting appears to be assisted by interactions with friends, neighbors and family members." (Nickerson, 2008)

While previous research focus on very local networks (e.g., spouses), we document that also broader social networks matter

Conclusion

"The entire act of voting appears to be assisted by interactions with friends, neighbors and family members." (Nickerson, 2008)

While previous research focus on very local networks (e.g., spouses), we document that also broader social networks matter

Mobilization through social networks is **bound by borders**:

- Within districts: impulse falls weakly with incr. distance
- Across district boundaries: impulse falls sharply to zero

Conclusion

"The entire act of voting appears to be assisted by interactions with friends, neighbors and family members." (Nickerson, 2008)

While previous research focus on very local networks (e.g., spouses), we document that also broader social networks matter

Mobilization through social networks is **bound by borders**:

- Within districts: impulse falls weakly with incr. distance
- Across district boundaries: impulse falls sharply to zero

Difficult to convert votes into seats when group members are spread inefficiently across districts (e.g., Rodden, 2019; Taylor & Johnston, 1979)

Khalid Mahmood (Norwegian politician)

1 language

Article Talk Read Edit View history

From Wikipedia, the free encyclopedia

For other people named Khalid Mahmood, see Khalid Mahmood (disambiguation).

Khalid Chaudry Mahmood (born 12 April 1959) is a Pakistani Norwegian politician for the Labour Party.

Khalid Chaudry Mahmood	
Born	12th of April, 1959 Mehta Losar, Punjab, Pakistan
Nationality	Norwegian
Alma mater	University of Oslo
Occupation	Politician

Born in Pakistan, he migrated to Norway as a teenager and studied economics at the University of Oslo. Mahmood has also worked as a journalist, author and been on the board of several organisations. In 1983 he was elected to serve in Oslo city council. He was re-elected in 1987, not in 1991 but again in 1995.[1] Having originally represented the Conservative Party, he joined the Labour Party in 1995. He left the Conservative Party in protest against a proposal to introduce financial reports regarding the immigrant population.[2] He was re-elected to the city council in 1999, 2003, 2007 and 2011. In 2011, he was placed on the last spot on the Labour electoral list, but was elected due to getting most personal votes of all candidates.[3] In 2015, he was named the longes sitting city council representative, having been elected for eight periods.[4]

He also served as a deputy representative to the Norwegian Parliament from 2005.[5]

Definition of BSU

"The purpose of dividing the municipalities in basic statistical units is to establish small, stable geographical units giving a flexible basis for presentation of regional statistics. Basic statistical units are geographically coherent and shall be as homogeneous as possible with respect to natural conditions, economic base, communication and building structure." (Statistics Norway, 2022)
